

## Research

---

My research vision is to create smart environments through smart everyday materials (e.g., textile and wood) that can be easily and seamlessly integrated into everyday objects (e.g., garments and furniture) at large scale using established methods (e.g. cutting and assembly). My PhD research focuses on the interaction side, i.e., how humans will interact with smart materials and how to build interfaces of smart materials to support the necessary interactions. My research work involves the design, development, and evaluation of interactions and new interfaces of smart materials. In addition, I am also interested in other topics in Human-Computer Interaction (HCI), such as Wearable Input System, AR/VR interactions, Accessible Interface, and Educational Tool. I have a strong record of 18/20 papers published at top HCI venues (CHI, and UIST) in these topics
